FraudScore

ANALYTICS & CONTROL TOOL FOR YOUR TRAFFIC

Stop wasting your budgets on fraudsters in digital advertising

2025

Fraud in numbers: the hidden cost for businesses

$140 B
lost worldwide
to ad fraud

up to 40 %
of all ad traffic
is fake

1 in 5
ad interactions
are fraudulent

18-20 %
of digital ad spend
is wasted on fraud

HOW MUCH OF THESE LOSSES IS YOURS?

How traffic is cheating you

TYPE OF FRAUD	Click fraud	Attribution	Events	Proxy
WHAT HAPPENS	Bots generate clicks or installs instead of real users	Partners “claim” organic traffic as their own	In-app events are faked	Fake device geolocation
WHY IT’S DANGEROUS	You pay for an audience that doesn’t exist	Analytics and KPIs are distorted	Engagement metrics are falsified	Targeting and campaign analysis become unreliable

How we detect fraud: technologies under the hood

Conversion parameter analysis

We check 100+ parameters, from IP reputation to anomalies in OS versions, browsers, and apps.

Attribution analysis

We detect click-spamming and organic traffic hijacking by analyzing click-to-install time (CTIT) and other patterns.

Post-install event analysis

We examine the sequence and logic of user events after the installation.

Data analysis at scale (Machine learning)

Our system processes billions of events to uncover complex correlations typical of fraud schemes that cannot be detected manually.

How does FraudScore work?

1

Integration

Connect FraudScore to your tracker or platform in 10 minutes.
No SDK required.

2

Data collection

We collect anonymized click, conversion, and event data in real-time.

3

Analysis

Each datapoint is checked using a combination of real-time technologies and post-analysis.

4

Result

You receive dashboard reports and ready-to-use evidence for reclaiming funds from ad networks and affiliates.

The result you get

Detailed traffic quality analytics from high-level overview to individual conversion analysis
