FRAUDSCORE / DESIGN SYSTEM

Brand Foundations

FraudScore Design System — logo, corporate colors, and marketing visual accents

1. Logo

FraudScore

For light backgrounds

Use Brand/Logo/Dark on white and light neutral surfaces.

FraudScore

For dark backgrounds

Use Brand/Logo/Light on dark teal, imagery, or other dark surfaces.

Symbol

Preserve proportions and original colors.

DECORATIVE BRAND DEVICE

Signals behind every decision

The mark may be enlarged and cropped to create depth without competing with the message.

Decorative only

Background Mark

A supporting graphic—not a replacement for the primary logo.

Color	Brand/Cyan/300 · #6DD2FF
Opacity	15–20% on light surfaces
Cropping	Allowed when the C remains recognizable

Do not use the multicolor symbol as a watermark. Keep text contrast independent from the decorative mark.

2. Corporate Colors

Brand/Teal/900
#003547
var(--fs-brand-deep)

Brand/Teal/700
#006685
var(--fs-brand-core)

Brand/Cyan/500
#00ACDE
var(--fs-brand-bright)

Brand/Cyan/300
#6DD2FF
var(--fs-brand-sky)

Brand/Green/500
#008823
var(--fs-brand-green)

Logo Accent Colors

Exact colors from the FraudScore symbol. Use them for supporting marketing accents. The same color family also identifies Fraud score categories: green = OK, cyan = Low, orange = Mid, red = High. Score roles remain separate from UI feedback.

Brand/Logo/Cyan
#00ACDE

Brand/Logo/Green
#00A32C

Brand/Logo/Orange
#F39018

Brand/Logo/Red
#EA502A

Cyan and Teal remain dominant

Use one or two logo accents per composition

Keep score roles separate from UI feedback

Interface Accent Colors

Colors for marketing-site icons, category markers, compact badges, charts, and illustrative interface details. These accents communicate variety—not product status.

Teal
#006685 · White 6.48:1

Green
#008823 · White 4.62:1

Orange
#F7931C · Ink 7.12:1

Red
#D3401B · White 4.65:1

Purple
#7B1FA2 · White 8.20:1

Turquoise
#00897B · White 4.32:1

Decorative and categorical use

Orange requires Ink foreground

Error, Warning and Success always use Schemes/*

3. Brand Gradients

The core brand gradient and approved headline applications. Use the treatment that matches the surface and preserves contrast.

CORE BRAND GRADIENT

Deep trust → clear action

Teal/900 → Teal/700 → Cyan/500 · horizontal, 90°

GRADIENT HEADLINE APPLICATIONS

DARK SURFACE · ON TEAL/900

See every signal.

Dark surface: Cyan/300 → Cyan/500 · 135°

LIGHT PAGE HEADING

See every signal.

Site page heading: Cyan/500 → Teal/700 · 135°

AA ✓ 6.76 : 1

2. Warnings

⚠️ Restrictions and prohibitions

- Do not use white text on #28B8EA — insufficient contrast (2.30 : 1)
- Do not use white text on #00ACDE — insufficient contrast (2.64 : 1)
- Do not use #007DA3 — this color is excluded from the brand palette
- High-contrast modes do not have to exactly replicate corporate colors — they follow WCAG AAA requirements
- Brand colors, UI feedback, and Fraud score colors have distinct roles, even when they share the same color values.
- UI feedback states (Error, Warning, Success) use dedicated semantic tokens. Do not substitute brand tokens for these roles.
- Fraud score categories intentionally use the logo's color family: green for OK, cyan for Low, orange for Mid, and red for High. These colors represent traffic risk, not UI feedback states, and should use dedicated score tokens.
- Orange is a logo accent and a Fraud score color, but is not a primary brand surface color.

✓ Use semantic roles ✓ Brand Green = corporate accent ✓ Success stays independent

3. Token Architecture

01 · PRIMITIVES

Brand Foundations

Shared corporate colors for product and marketing. One source of truth, consumed through semantic aliases.

02 · PRODUCT ROLES

Product Semantics

Material 3 UI roles use Schemes/* in Light, Dark and High Contrast modes. Fraud score categories should use dedicated semantic tokens, separate from UI feedback.

03 · BRAND EXPRESSION

Marketing Semantics

Expressive website tokens for brighter surfaces, gradients and campaigns. Brand Green accents the story; Success remains independent.

FRAUDSCORE / DESIGN SYSTEM

Brand Marketing Patterns

Composition patterns for presentations, campaigns, and marketing materials

1. Brand Spectrum Rail

The brand stripe brings the presentation’s rhythm into other marketing formats. The color order is fixed; the pattern is decorative and does not encode statuses.

PRESENTATION / CAMPAIGN / SOCIAL

One visual language across product and marketing

Use as one continuous stripe. Do not change the order or turn the segments into a data legend.

2. Watermark Compositions

The background mark may be scaled and cropped, but must not be distorted, recolored outside Brand/Cyan/300, or used at high opacity.

BACKGROUND MARK

Corner crop

For covers and section screens. The mark extends beyond two edges.

BACKGROUND MARK

Edge bleed

For dark surfaces. White text is allowed only on Teal/700 or Teal/900.

BACKGROUND MARK

Content background

For calm informational blocks. The mark remains secondary to the content.

3. Data Highlights

The large number is the main carrier of the message. One metric, one short label, and one background; no additional decorative elements are needed.

LIGHT CANVAS

86%

fraud detected before payout

Use one number per composition

INK ON CYAN

4×

faster review workflow

Use one number per composition

WHITE ON TEAL

–32%

manual investigation time

Use one number per composition

4. Process & Category Accents

Color helps distinguish stages and thematic blocks in a presentation. It does not indicate Success, Warning, or Error — product semantic tokens remain reserved for statuses.

01

Signals

Collect evidence

02

Context

Connect the data

03

Decision

Explain the risk

04

Action

Show the outcome

Important: the color sequence can be adapted to the narrative, but the same color must retain its meaning within a single material.

5. Neutral Canvas & Split Layout

A neutral Surface → White transition creates depth without an additional brand color. In a split layout, color is used as a standalone plane rather than mixed with green.

EDITORIAL SPLIT

Lead with the idea

Use whitespace for the message and a single brand plane for emphasis.

86%

single proof point

HIGH CONTRAST

Build trust

Keep the narrative calm

Teal carries the brand. The neutral field carries explanation, proof and supporting detail.

Do not use a Cyan → Green gradient. If a transition is needed, keep it neutral; brand colors work as separate planes, stripes, and accents.
